Malignant Lymphomas: Biology and Treatment Aug 09 2020 In the last few years a good deal of information related to the biology and treatment of malignant lymphomas has been accumulated and published in journals and monographs. There is, however, no book that gives a concise and objective update of this information or presents a general survey of the subject. The contributors to this book are international authorities, and on the basis of their personal experience and data from the literature they have written a high-level update on malignant lymphomas which will be of interest to both specialists and

nonspecialists.

Retinoids in Oncology Feb 01 2020 Recent developments with respect to the biology and clinical use of retinoids in cancer therapy and prevention are comprehensively covered by experts in this new field. Newer aspects of molecular mechanisms of retinoid effects, the cellular biology and the developmental effects of these compounds are presented together with a comprehensive description of the latest findings of retinoid pharmacology, toxicology and clinical effects in a wide range of hematological and solid malignancies.

Geoscience Education Feb 12 2021 This book presents research in Geoscience Education focusing on indoor and outdoor environments in which teaching geoscience gains particular relevance, significance and contextualization. The research areas that are presented throughout

the thirteen chapters cover a wide variety of subjects ranging from educational resources and fieldwork to science models. Chapters discuss specific geoscience topics such as earthquakes, rocks, fossils and minerals. Other chapters present a more interdisciplinary approach addressing topics that aren't usually examined, such as geomedicine and geoethics, with a specific focus on sustainable development and their alignment with the school curricula. Throughout the book readers can find research-based arguments illustrated with practical examples, which will help them to innovate in their curriculum development area, classroom practices and pre and in-service teachers' education. The book challenges readers to improve Geoscience Education by changing the ways of teaching, by enabling students to exploit their natural curiosity, and by spurring a learning process that should not be confined to the classroom but rather maintained throughout life.
